**Optical thin film having high laser resistance - comprises
high and low refractive index layers of neodymium and magnesium
fluoride(s) for high UV laser resistance**

Patent Assignee: NIPPON KOGAKU KK (NIKKO)

Abstract (Basic): JP 63142302 A

A multilayer optical thin film consists of a high refractive index thin film and a low refractive index thin film. The thin film accepts extreme ultraviolet ray laser beams having an optical strength of at least 1.3 J/cm².

The high refractive index thin film comprises; neodymium fluoride having an optical film thickness of $\lambda/4$. The neodymium fluoride has no absorption at the extreme ultraviolet ray region and shows a high refractive index of 1.66 - 1.70. The low refractive index thin film comprises; MgF₂ having an optical film thickness of $\lambda/4$.

USE/ADVANTAGE - The optical thin film is applied to an antireflection film, interference filter, or interference mirror. The optical thin film has no damage even if an extreme ultraviolet ray laser beams having an optical strength of at least 1.3 J/cm² are irradiated at the film.
